

Managed SIEM Services

Managed SIEM Services

from Flat Earth include the following:

- **Implementation**

Implementation and configuration the SIEM system, based on your organization's specific security needs.

- **Log collection and analysis**

Collect logs from various sources, such as servers, network devices, and applications, and analyze them for security incidents.

- **Threat intelligence feeds**

Implementation of threat intelligence feeds, which provide information on the latest threats and vulnerabilities.

- **Real-time monitoring**

24/7 monitoring using correlation, advanced analytics, and machine learning algorithms to identify potential threats.

- **Incident response**

Incident response services, which include investigation, containment, and remediation of security incidents.

- **Reporting**

Regular reporting on the security events and incidents that have been detected, and the actions that have been taken to address them.

- **Compliance Support**

Assist your organization with relevant industry compliance regulations and standards, such as PCI DSS, HIPAA, and GDPR, by identifying vulnerabilities that may affect compliance and helping to remediate those vulnerabilities.
